ABOUT THE COURSE

The Master of Digital Learning Futures is an innovative industry and education relevant program designed to provide leading edge knowledge for understanding, creating and teaching with digital resources and new media.

This cross disciplinary program explores the digital paradigm in education, and combines contemporary theory with real-world new media and ICT production skills for developing digital resources and creative learning environments.

In this course, students will have the opportunity to explore the theory behind the Matrix and issues around computer hacking. Students will learn to code, use innovative digital technologies to support quality teaching and learning, use a drone to support the education curriculum, and use video games, apps and mobile devices to design a technology-based curriculum.

The Master of Digital Learning Futures will be attractive to a range of career seekers including teachers, teaching centre technology officers, instructional designers, education software developers, learning and development specialists and e-learning specialists.

This course is offered in internal and external modes for both full and part-time domestic and international students.

ADMISSION REQUIREMENTS

Admission to Charles Darwin University higher education coursework programs are received and processed by the South Australian Tertiary Admissions Centre (SATAC). Students must have completed a recognised Bachelor’s degree or higher to enrol in this course.
COURSE STRUCTURE
This course includes core education units, and a wide range of electives in new media design, web development, introductory web programming and systems management. The program concludes with a research project grounded in a real-world situation, which can be either theory focused or digital resource production based, and linked to an industry-based internship.
